ROTSHIDZWA **NENUNGWI**

Junior Software Developer

082 598 9861 • nenungwirotshidzwa@gmail.com • Protea Glen, Soweto, Gauteng

PROFESSIONAL SUMMARY

Junior Software Developer with over two years of experience in government IT environments, specializing in full-stack maintenance and development across AngularJS/Angular, C#/ASP.NET, and SQL Server. Proven track record diagnosing and resolving complex, cross-layer production issues — from authentication and scheduled-job failures to database and infrastructure problems — across multiple government systems (SAWIC/SAWIS, EPR, AtoM, STBApplication). Experienced in IIS deployment, SSL/TLS configuration, Linux/Elasticsearch administration, and REST API integration. Strong problem-solver committed to delivering secure, reliable, and well-documented applications.

EDUCATION

University of Johannesburg
Diploma in Business Information Technology
2021 – 2023

Nndweleni Secondary School
National Senior Certificate
2019

TECHNICAL SKILLS

- Frontend: AngularJS, Angular, React, HTML, CSS, JavaScript, Kendo UI
- Backend: C#, ASP.NET MVC / Web API, Entity Framework, Dapper, Node.js
- Database: MS SQL Server (T-SQL, stored procedures), MySQL, MariaDB
- Server & Infrastructure: Windows Server, IIS, Linux (Ubuntu), Nginx, SSL/TLS, Elasticsearch, PHP-FPM
- Integration & APIs: REST APIs, ArcGIS REST Services, OAuth2, HMAC Authentication, Quartz.NET
- Tools: Git, Visual Studio, SSMS, DBeaver, Postman, Microsoft Office
- Soft Skills: Root-cause analysis, problem-solving, teamwork, communication, documentation

CERTIFICATIONS

- Full Stack Development
- Problem-Solving, Algorithms, Introductory Python
- Tutor Recognition Certificate
- Microsoft 365 Fundamentals
- IBM AI Fundamentals
- Google Data Analytics Certificate

PROFESSIONAL EXPERIENCE

Junior Software Developer
State Information Technology Agency (SITA) | May 2026 – Present

- Maintain and enhance government production systems full-stack (AngularJS/Angular, C# ASP.NET Web API, SQL Server) for the Department of Forestry, Fisheries and the Environment (DFFE), including the SAWIC/SAWIS platform and its Extended Producer Responsibility (EPR) module.
- Diagnose and resolve complex, cross-layer production issues spanning the database, API, and scheduled-job layers — including HMAC authentication failures, Quartz.NET job/notification bugs, and email/registry-log discrepancies.
- Design and implement full-stack feature changes (stored procedures, C# DTOs/repositories, Angular UI) for reporting, filtering, and certificate-generation functionality.
- Administer and troubleshoot the AtoM (Access to Memory) archival system for the Department of Arts and Culture, including Elasticsearch, MariaDB, and PHP-FPM on Ubuntu — supported a large-scale reindex of over 8 million archival records.
- Integrated new Azure-hosted ArcGIS REST endpoints into SAWIC to replace a decommissioned GIS portal, including token-based authentication.
- Build, renew, and deploy SSL/TLS certificates for production government domains.
- Maintain the STBApplication set-top box subsidy system (ASP.NET MVC, Entity Framework) and its SENTECH installation API integration.
- Contributed to an internal IT audit on database change management, producing formal process documentation and an evidence-tracking template.

Software Developer Intern / Experiential Trainee
State Information Technology Agency (SITA) | 2024 – April 2026

- Developed and maintained client-facing web applications used by internal and external stakeholders, using Angular, C#, and ASP.NET.
- Deployed and managed applications on Windows Server/IIS; administered Windows Server, Linux, and MS SQL Server (user/admin management, password resets, performance monitoring).
- Configured and managed SSL certificates for secure connections.
- Performed database migration and recovery processes across MySQL and MS SQL Server, ensuring minimal downtime in production.
- Integrated web applications with mail servers to automate notifications.
- Collaborated with senior developers to optimize performance and troubleshoot issues.
